The Konnech Election Systems Bombshell: A Thread

Election poll forecasting is rendered useless by election fraud.

That's why we will continue to follow & report on documented threats to fair & honest elections.

Let's get started.

1/-

Monday October 3rd, 2022

The New York Times decides to launch a hit piece on True the Vote, who they say falsely accused an American company of hosting the data of 2 million US election workers on a secret computer server in communist China.

Stuart Thompson writes about online information flows.

Oct. 3, 2022

At an invitation-only conference in August at a secret location southeast of Phoenix, a group of election deniers unspooled a new conspiracy theory about the 2020 presidential outcome.

Using threadbare evidence, or none at all, the group suggested that a small American election software company, Konnech, had secret ties to the Chinese Communist Party and had given the Chinese government backdoor access to personal data about two million poll workers in the United States, according to online accounts from several people at the conference.

Less than 24 hours later, the LA County DA announces the Michigan arrest of the CEO of that very same company, after an investigation, for storing LA County election worker data "on servers in the Peoples Republic of China."

October 4, 2022: Head of Election Worker Management Company Arrested in Connection with Theft of Personal Data

Contact:
Media Relations Division
(213) 257-2000
Media@da.lacounty.gov

Los Angeles County District Attorney George Gascón announced today that an executive with a Michigan-based company responsible for the software used in managing Los Angeles County election poll workers has been arrested as part of an investigation into the possible theft of personal identifying information of those workers.

"I want to thank my prosecutors and investigators for their commitment to eliminating cyber intrusions against government entities and local businesses," District Attorney Gascón said. "Data breaches are an ongoing threat to our digital way of life. When we entrust a company to hold our confidential data, they must be willing and able to protect our personal identifying information from theft. Otherwise, we are all victims.

This investigation is concerned solely with the personal identifying information of election workers. In this case, the alleged conduct had no impact on the tabulation of votes and did not alter election results. But security in all aspects of any election is essential so that we all have full faith in the integrity of the election process."

Earlier today, Konnech Corporation Chief Executive Officer Eugene Yu was taken into custody on suspicion of theft of personal identifying information by investigators from the District Attorney's Office Bureau of Investigation with assistance from the Meridian Township Police Department in Michigan. In addition, hard drives and other digital evidence were seized by LADA investigators.

The District Attorney's Office is seeking Yu's extradition to Los Angeles.

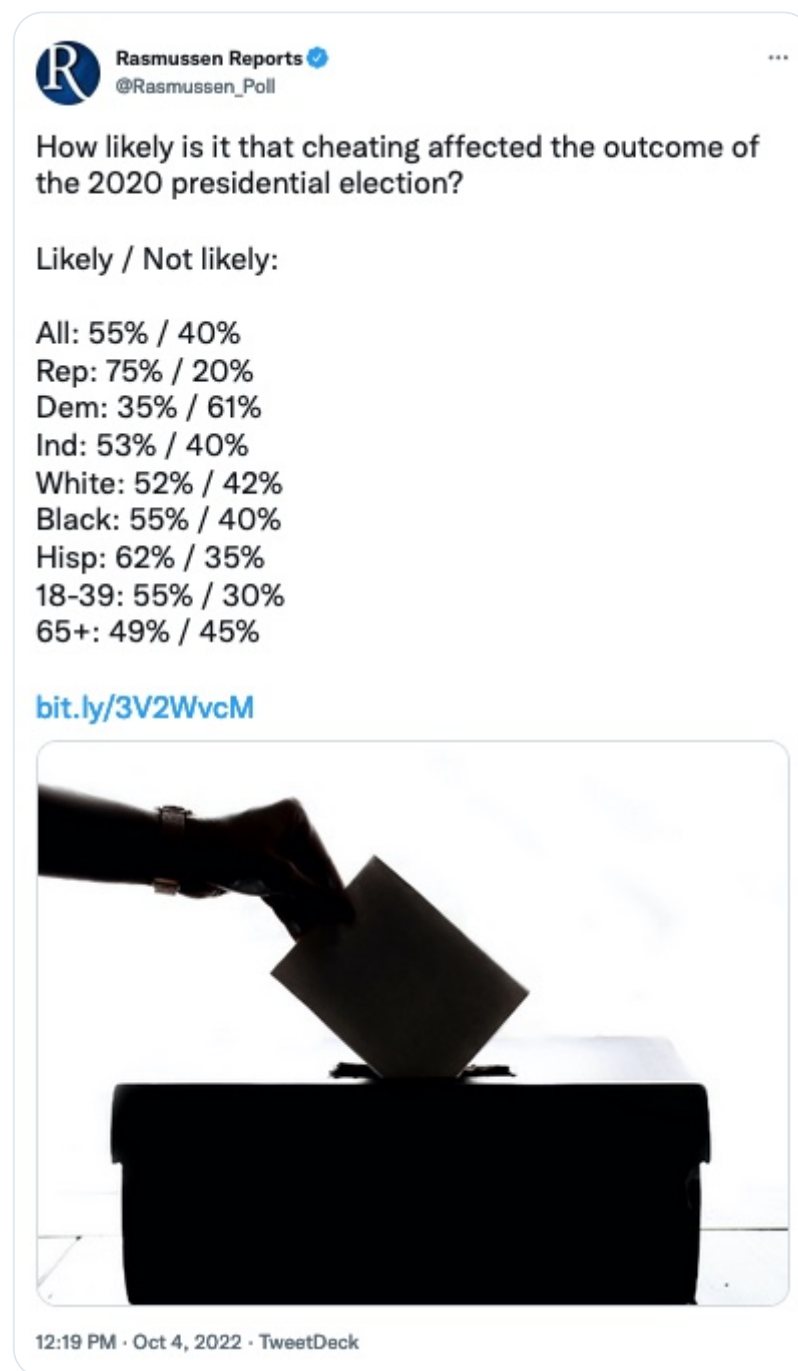

Konnech distributes and sells its proprietary PollChief software, which is an election worker management system that was utilized by the county in the last California election. The software assists with poll worker assignments, communications and payroll. PollChief requires that workers submit personal identifying information, which is retained by the Konnech.

Under its \$2.9 million, five-year contract with the county, Konnech was supposed to securely maintain the data and that only United States citizens and permanent residents have access to it. District Attorney investigators found that in contradiction to the contract, information was stored on servers in the People's Republic of China.

The East Lansing Police Department and Ingham County Sheriff's Office in Michigan also assisted in the investigation.

Coincidentally, we also publish our latest U.S. Election Integrity poll, showing the issue again ranking at #5 among all likely voters for the upcoming midterm elections with 84% Concerned, 61% Very Concerned. We also rerun our 2020 election cheating survey.

The arrest of CEO Eugene Yu by the LA DA triggers October 4th reminders of prior month reporting by KanekoaTheGreat

FBI Conceals Chinese Infiltration of U.S. Election Software

[kanekoa.substack.com/p/fbi-conceals...](https://kanekoa.substack.com/p/fbi-conceals-chinese-infiltration)

5/-

FBI Conceals Chinese Infiltration of U.S. Election Software

"This is a red Chinese communist op run against the United States by Chinese operatives, and it's a disaster."

<https://kanekoa.substack.com/p/fbi-conceals-chinese-infiltration?r=16zqp>

And new reporting by The Right Scoop arrives on how True the Vote previously reported their discovery of this Konnech / Chinese server connection to the FBI way back in January 2021.

6/-

BREAKING: CEO of election company that sued True the Vote was just ARRESTED for exactly what True the Vote h...

Last month True the Vote was sued by a Michigan election company for defaming them. According to the Texas Tribune, Konnech sued True the Vote for claiming, among other things, that they stored US ...

<https://therightcoop.com/breaking-ceo-of-election-company-that-sued-true-the-vote-was-just-arrested-for-exactly-what-true-the-vote-has-been-cl...>

KanekoaTheGreat describes what happens this April when the FBI DC office finally gets the Konnech file from their field office. The DC office doesn't target Konnech, it targets True the Vote. Why they would ever do that remains a mystery.

7/-

The FBI agents indicated that Konnech had already “been on their radar” and that there were “lots of other problems” with the U.S. election company, including “banking issues” and problems involving the company’s overseas operations in “Australia” and “Canada.”

In April 2022, Engelbrecht received a call from one of the FBI agents, who informed her that the FBI’s “Washington D.C. headquarters” was now involved in the investigation.

Engelbrecht described how everything changed after this call, “There was no more goodwill, there was no more let’s work together, the script had been flipped, and now we were the target,” she said. “That was a very disturbing call.”

The agent informed Engelbrecht that “two women” at the FBI’s headquarters believed that Phillips and Engelbrecht were “in the wrong for doing this” and that the D.C. office was now trying “to figure out how you guys broke the law to find all of this.”

Engelbrecht added, “which of course we didn’t, but that was kind of their MO [modus operandi], they were going to try to pin something on us, and today you can pick your headlines about how the FBI has done this time and again.”

Phillips remarked, “The problem is they know about this, and they chose to do nothing. They chose to investigate it, and in the end, they chose to blame us, but this is China. These are Chinese operatives in the United States; these are Chinese citizens who are programming this.”

Meanwhile, a humiliated New York Times reporter files his follow-on article, no doubt after screaming all day at the ‘intelligence community sources’ who set him and the paper up for such a swift propaganda catastrophe.

8/-

By **Stuart A. Thompson**

Oct. 4, 2022, 8:34 p.m. ET

The top executive of an elections technology company that has been the focus of attention among election deniers was arrested by Los Angeles County officials in connection with an investigation into the possible theft of personal information about poll workers, [the county said](#) on Tuesday.

Eugene Yu, the founder and chief executive of Konnech, the technology company, was taken into custody on suspicion of theft, the Los Angeles County district attorney, George Gascón, [said in a statement](#).

Konnech, which is based in Michigan, develops software to manage election logistics, like scheduling poll workers. Los Angeles County is among its customers.

The company has been accused by groups challenging the validity of the 2020 presidential election with storing information about poll workers on servers in China. The company has repeatedly denied keeping data outside the United States, including in recent statements to [The New York Times](#).

Mr. Gascón's office said its investigators had found data stored in China. Holding the data there would violate Konnech's contract with the county.

Yesterday, KanekoaTheGreat files a follow on article:

Konnech CEO Eugene Yu's connection to China's National People's Congress & Chinese telecom giants

kanekoa.substack.com/p/konnech-ceo-...

9/-

Konnech CEO Eugene Yu's connection to China's National People's Congress & Chinese telecom giants

I meticulously documented everything I found about Eugene Yu for the last six weeks — and now I'm ready to teach New York Times reporters and FBI agents what I found. It's super simple!

<https://kanekoa.substack.com/p/konnech-ceo-eugene-yus-connection>

And thus Konnech CEO Eugene Yu is caught lying about storing the personal data of 2M US election workers in China. Legacy media goes totally silent. The CCP likely has had the access passwords to multiple US election systems and devices FOR YEARS.

What to do now?

10/-

Was the 2020 presidential election "the most secure in American history?" Arguably it certainly was not and votes counts could have been manipulated by our economic enemy, the CCP. Why? Proof? The Wisconsin legislature, for one, officially found voting systems online.

11/-

The OSC learned that all machines in Green Bay were ESS machines and were connected to a secret, hidden Wi-Fi access point at the Grand Hyatt hotel, which was the location used by the City of Green Bay on the day of the 2020 Presidential election. The OSC discovered the Wi-Fi, machines, and ballots were controlled by a single individual who was not a government employee but an agent of a special interest group operating in Wisconsin.

The OSC began a comprehensive investigation of voting machines in Wisconsin. As part of that investigation, subpoenas were sent to Dominion, ESS, and Command Central, LLC, a Dominion reseller and servicer. The information sought included information about who, when, where, and what updates the machines were provided. The OSC learned that one machine company representative stated that the voting machines were “wiped” during updates, meaning they did not retain federally required voter data.

It was discovered that Command Central, LLC, received images of cast ballots on election night using the internet. Command Central is alleged to be holding actual ballots cast on election night at its offices in Minnesota in violation of Wisconsin law. The OSC was not able to complete this portion of its investigation, however.

As of the date of this Report, the voting machine companies have refused to comply with the OSC’s legislative subpoenas, and have provided no data. The OSC considers this investigation incomplete but ongoing.

The OSC also sought information about the machines in Wisconsin used on election night from the clerks. The clerks either did not possess the data sought by the OSC or refused to provide it, with Green Bay and Madison insinuating that providing secure voting machine data to the OSC would somehow compromise election integrity. In other words,

The Konnech Chinese data hosting security issue was reported to the FBI by True the Vote in January 2021. The FBI ended up attacking True the Vote for identifying the issue which - here one month from midterms - is entirely unresolved and subject-embargoed by legacy media.

12/-

In a [live chat](#) released on Monday, Catherine Engelbrecht and Gregg Phillips appeared together on “[truethevote.locals.com](#)” to discuss their 15-month involvement with what was characterized to them as a “counter-intelligence operation” with the Federal Bureau of Investigation into American election company Konnech Inc.

Konnech, based out of East Lansing, Michigan, builds software to [manage](#) the poll workers, poll locations, campaigns, assets, and supplies necessary to run elections in the United States, Canada, and Australia.

In January 2021, Phillips said that the cyber analyst he had been working with encountered an “oddity in some of the URLs” such as [vote4la.com](#), [vote4detroit.com](#), and [vote4boston.com](#), which Konnech’s “[PollChief](#)” software application used to gather personally-identifying information about poll workers.

Using [Binary Edge](#), a software product companies use to identify and assess the risk of cyber breaches, “We began to look at where do these URLs resolve to. We found that most of them resolve to one I.P. address and that I.P. address — the URL resolved in China,” Phillips said.

“What we also learned in our review, [apps.konnech.com](#) [.net], resolved into this same URL in China, meaning that the application itself was residing in China,” he continued.

“In Binary Edge, you can figure out what type of database they are using, their database port, and all the different services offered by ports in this particular application living in China. It turned out that not only did it live there, but they left the database open.”

This database “stored the personally identifying information of over a million Americans,” he emphasized.

Engelbrecht and Phillips decided that “this was a major national security risk” and immediately took the information to the FBI.

Cornered by the Konnech arrest, legacy media amps up their lie that the 2020 elections were the most secure in American history. They have no proof now that the CCP had no access to our 2020 election systems. Quite the opposite. So they're spraying their same old propaganda

The Washington Post
Democracy Dies in Darkness

Where Republican election deniers are on the ballot near you

By [Adrian Blanco](#) and [Amy Gardner](#)

Updated Oct. 6 at 5:29 p.m.

Originally published Oct. 6, 2022

    422

Election deniers will be on the ballot in 48 of 50 states and make up [more than half of all Republicans running for congressional and state offices](#) in the midterm elections. Nearly 300 Republicans seeking those offices this November have denied the outcome of the last presidential election, according to a Washington Post analysis.

Thus some company screenshots are in order. All of this data about U.S. election operations - during & after the 2020 elections - was and still is hosted in communist China, under the benevolent and ever watchful eyes of the CCP, who naturally only want the best for America.

Security Embedded Design

Konnech EMS development starts with security-embedded design.

- Threat modelling as part of the design process.
- Security requirements specifically included in the solution design.
- Access control and authentication.
- Application of least privilege principles, to users and inter-process communications.
- Use of encryption to protect sensitive data at rest and in transit.
- Validation of all inputs from untrusted sources.

Security In Development

Konnech imposes a set of security principles throughout development, testing and deployment.

- Prevention of unauthorized changes to code.
- Peer review of all code.
- Application security testing and use of code scanning tools.
- Secure code deployment processes using electronic signing and authentication.
- Manual security testing include in the Development Life Cycle.

[Request a Demo](#)

Infrastructure and Hosting Security

The Konnech as-a-service EMS is hosted on secure infrastructure meeting the highest standards appropriate for critical systems in public sector organizations. Multiple security layers are designed to protect the system from intrusion, including advanced firewall and network protection technology, and secure monitoring and logging enables analysis of intrusion attempts. Requirements for all live data to be stored in data centers located within the jurisdiction are respected where necessary.

Innovative Solutions By Konnech

Our products are meant to provide simple solutions to complex circumstances. Our VoteEdge Technology is a shake to vote application for visually impaired voters. One of the many products patented by Konnech to provide election managers with innovative ways to support their voters. Patent #8,949,745B2

That brings you up to date.

We'll add more developments as they ... develop.

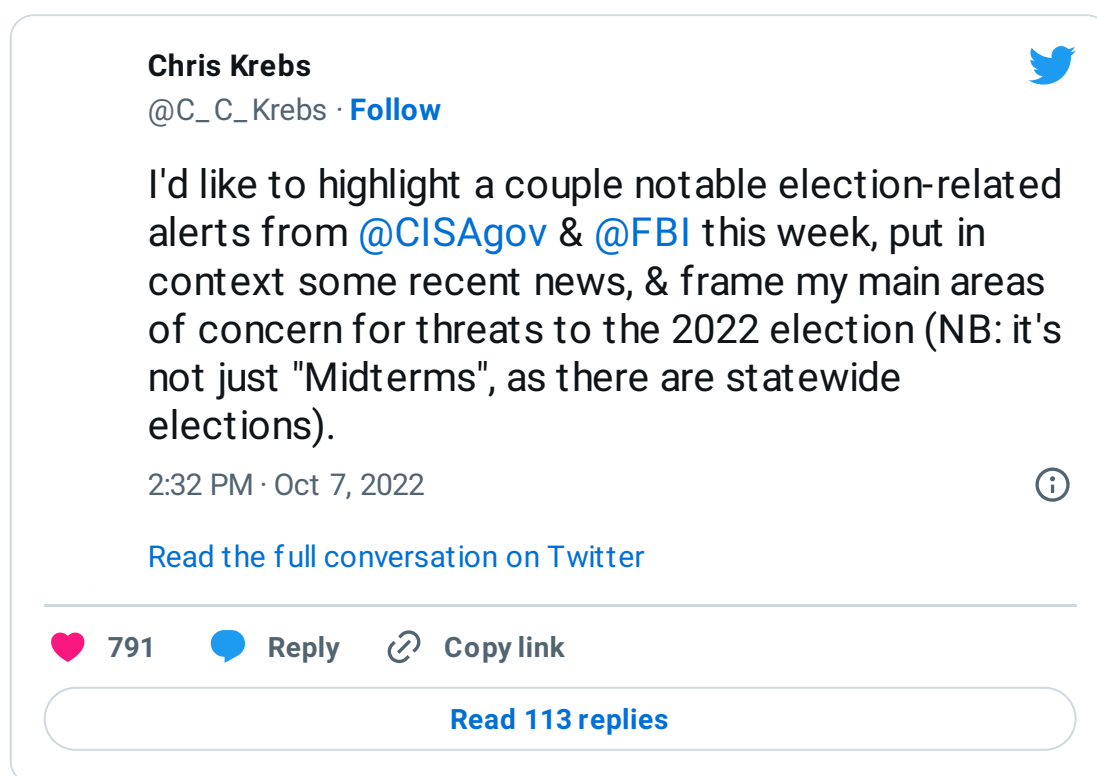

In the meantime we'll leave you with this ancient 2021 exhibit. A "completely bonkers conspiracy theory" perhaps. But so was any evidence that China held the records of 2M US election workers.

New Development:

Mr. " ... the most secure in American history" himself has been tasked with spraying air freshener across this Konnech access mess, just like he tried in November 2020. He will not even mention the company name. His thread is here -

18/-

His "no evidence" deflection dance is silent about the official investigation that determined the server is in communist China, thus undercutting all of the assurances about voter security that follow. He references an FBI announcement ...

19/-

... that is utterly silent about their own involvement in this matter since at least January 2021. Here the whitewash runs thin. Konnech is a communications & security hub for 2M American election workers secretly hosted in China. US Voters were lied to about this for years.

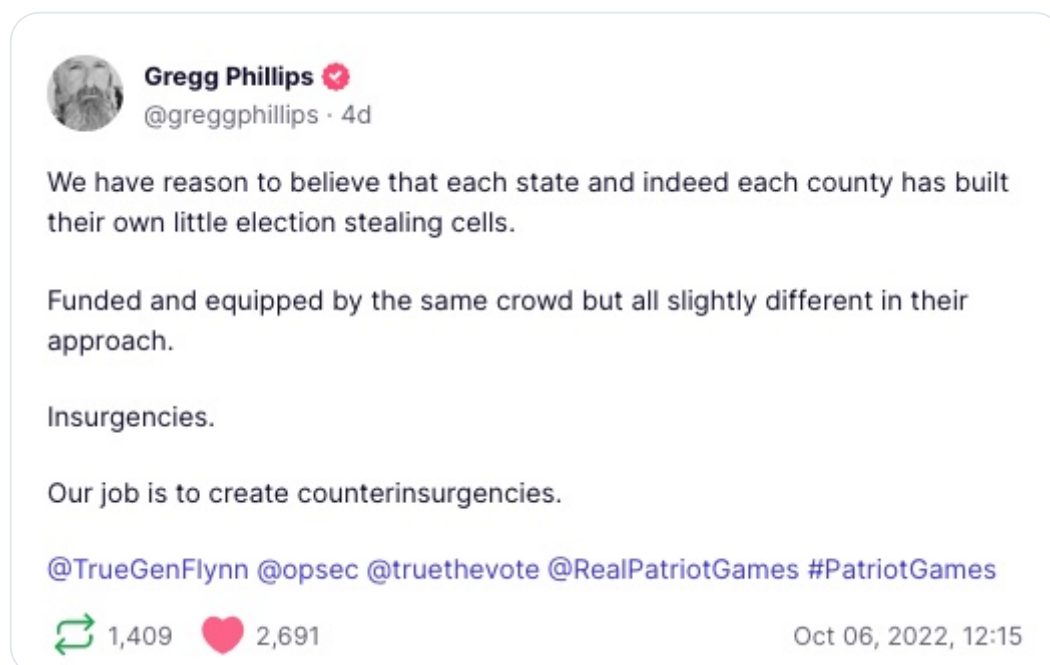

20/-

Update - New development

Just spotted this. If the author hadn't -

- 1 - Discovered the Konnech server in China
- 2 - Reported that to the FBI in Jan 2021
- 3 - Been dragged into court by Konnech
- 4 - Saw the LA DA confirm the China server

we might have termed this meritless. Not now

Update: Friday October 14th

22/-

<https://archive.ph/LI7Np>

And the LA DA's warrant was published. A bombshell - s3.documentcloud.org/documents/2313...

"any employee for Chinese contractors working on PollChief software had "superadminisraion" privileges for all PollChief clients ... a "huge security issue."

The FBI knew this FOR YEARS.

23/-

OVERT ACT 7

On or about August 18, 2022, Luis Nabergoi, project manager for Konnech's contract with the County of Los Angeles, confirmed via the messaging app DingTalk that any employee for Chinese contractors working on PollChief software had "superadministration" privileges for all PollChief clients. Mr. Nabergoi described the situation as a "huge security issue."

This brought out new reporting by RedState -

Election Software Firm Used by LA County - and by Counties in Swing States - Gave 'Superadministrator' Privileges to Contractors in China

24/-

Election Software Firm Used by LA County - and by Counties in Swing States - Gave 'Superadministrator' Privilege...

Election workers' personally identifying information was routinely sent to China by

<https://redstate.com/jenvanlaar/2022/10/14/election-software-firm-used-by-la-county-and-by-counties-in-swing-states-gave-superadministrator-pr...>

Along with an admission by the NY Times that a True the Vote tip from Greg Phillips sparked the LA DA investigation that ultimately led to Mr. Yu's arrest.

How painful for them was it to print THAT?

New and oh no. There it is - "access to all the critical election subsystems that are required to rig the election, in a way that no one will ever notice."

31/-

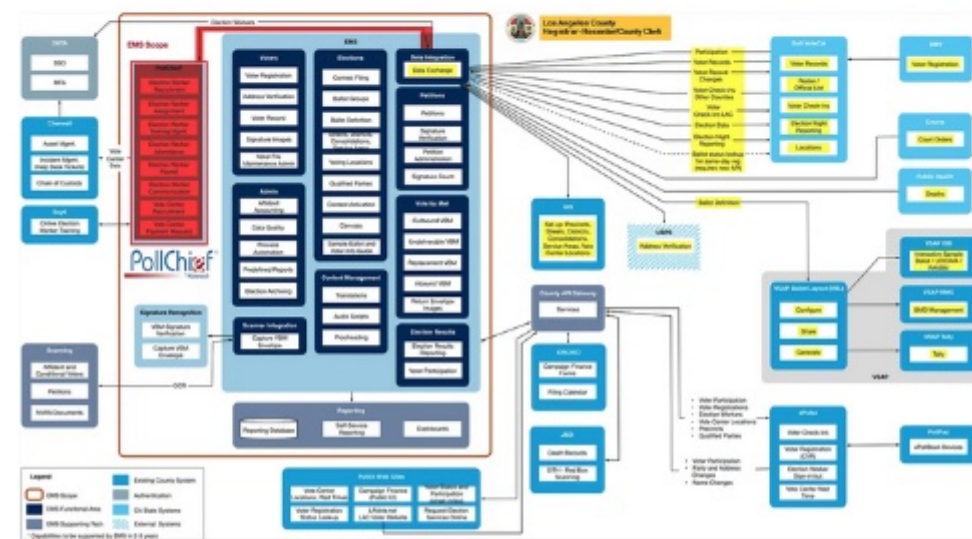

"On Aug. 10, 2021, Los Angeles County’s election office uploaded a network diagram of its Election Management System (EMS) called “EMS Future State v15” to the county registrar’s website.A network diagram is a digital roadmap that identifies data flow within an organization."

32/

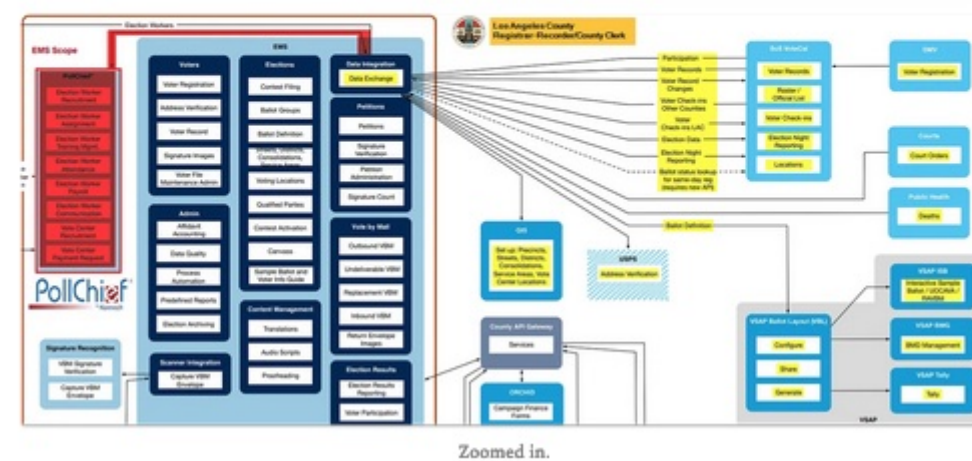

"If Los Angeles county’s uploaded diagram is accurate, it demonstrates that Konnech’s PollChief software has a direct “data integration” and “data exchange” point with the county’s overall EMS software."

33/-

According to the county's diagram, PollChief appears to integrate with; "Voter Registration," "Voter Records," "Election Night Reporting," "Address Verification," and "Ballot Layout," among other data that moves to that same "data integration" and "data exchange" point.

Source: Los Angeles County Registrar

Reader Reminder: The last thing U.S. voters knew before the Konnech arrest was there was no evidence of ANY U.S. election data now under CCP control.

LA DA investigators then called Konnech "a huge security issue & the largest data breach in United States history." 34/-

Update: U.S. District Judge Kenneth Hoyt orders True the Vote leaders jailed in contempt of court in Texas for failing to divulge the name of a confidential FBI informant. Boy does this ever look bad for the FBI. 35/-

Konnech censorship & toxicity in legacy media approaches black plague levels.

CCP influence over WaPo owner Bezos is apparently enormous enough to get The Post to censor it's own site search results.

36/-

And a majority of all U.S. likely voters aren't fooled or frightened of being called an Election Denier by the pissants in the press, they're worried about the integrity of their legal vote being recognized and counted.

Update: True the Vote sprung from the slammer late yesterday.

And tomorrow is election day.

39/-

Good Morning !

Today in Konnech

- True the Vote
- 1 - Discovers Konnech server in China
 - 2 - Reports this to FBI in Jan 2021
 - 3 - Tip's the LA DA
 - 4 - Dragged into court by Konnech
 - 5 - LA DA confirms China server
 - 6 - Founder of Konnech charged
 - 7 - True the Vote founders jailed
 - 8 - 🙌

George @BehizyTweets

GREAT NEWS! Gregg Phillips and Catherine Engelbrecht have been released from prison. The 5th circuit court of appeals rightfully overturned the corrupt district court's ruling. Praise GOD

COVID & Our Freedoms Jan 2022: 59% of Democratic voters would favor a government policy requiring that citizens remain confined to their homes at all times, except for emergencies, if they refuse to get a COVID-19 vaccine. Such a proposal is opposed by 61% of all voters. 1/3

Jan 2022: 48% of Democratic voters think fed & state governments should be able to fine or imprison individuals who publicly question the efficacy of the existing COVID-19 vaccines on social media, television, radio, or in online or
